

EDUCATION

ENSTA - Institut Polytechnique de Paris MSc in Embedded Systems Engineering, through apprenticeship Relevant coursework: Kalman filtering, machine learning, image processing, operating systems & concurrency, high-performance embedded computing.	Sep 2024 - Sep 2027 (Expected) Brest, France
University of Toulon - Institute of Technology BSc in Electrical Engineering and Industrial Computing Embedded Systems track: electronics, embedded C, microcontrollers, sensors, PCB design, power electronics, robotics.	Sep 2022 - Jul 2024 Toulon, France

PROFESSIONAL EXPERIENCE

Robotics Software Engineer Enchanted Tools - Navigation R&D, Paris, France - Led integration of a complete social navigation stack on Mirokaï robots: 3D human perception, body-orientation estimation, social formation tracking, and motion-aware proxemic cost modeling. - Developed a 360-degree perception pipeline fusing nine ToF sensors with an RGB-D camera for stable obstacles in local costmaps and collision monitoring. - Built and validated Open-RMF fleet orchestration across multiple physical Mirokaï robots.	Sep 2024 - Present
Test and Integration Technician Intern Enchanted Tools - V&V, Paris, France - Designed and iterated a 3D-printed charging interface to support autonomous docking of Mirokaï robots. - Characterized seven pairs of robotic hands using endurance and precision tests, motion capture, and field testing.	Apr 2024 - Jul 2024

SELECTED ROBOTICS PROJECTS

VLM2Nav - Vision-Language Models for Social Robot Navigation ROS 2/Gazebo testbed with Qwen3-VL via vLLM on Jetson AGX Orin, temporal RGB to structured social decisions via Nav2/MPPI. HuNavSim reactive pedestrians, semantic trajectory critic, nine-scenario reproducible benchmark, with the VLM kept outside the low-level control loop.	2026 - Present
PHARE - Autonomous Humanoid Research and Experimentation Platform Co-Founder Software & Embedded Systems Lead. Modular wheeled-biped humanoid platform covering ROS 2, firmware/electronics, CAN, state estimation, optimal control, and reinforcement learning.	2026 - Present
RoboCup MSL World Championship - Robot Club Toulon Robotics Software Developer Goalkeeper Robot Lead (2026). C# autonomous goalkeeper, stereo 3D ball reconstruction, ballistic prediction, reactive positioning, and a 2-axis arm. World runner-up 2026.	2022 - Present
French Robotics Cup - FIPATECH Founder Team Leader & Software Lead. ROS 2 holonomic stack, Nav2, MPPI, multi-sensor localization, online task planning. 17th / 89 in the Senior category.	2024 - 2026

TECHNICAL SKILLS

Programming: C++, Python, C, C#, MATLAB/Simulink, Bash
Robotics: ROS/ROS 2, Nav2, MPPI, ros2_control, Open-RMF, Isaac ROS, Gazebo, TF2
Perception & ML: PyTorch, vLLM, Nvblox, OpenCV, TensorRT, YOLO
Systems & Embedded: Linux, Docker, NVIDIA Jetson, STM32, FreeRTOS, micro-ROS, CAN

ADDITIONAL

Open Source: Maintainer, Awesome French Robotics; C++ Contributor, PaxOS
Leadership: President, ENSTA Robotics Club
Languages: French (Native); English (TOEIC 875/990)
